Dear Sir or Madam:

If it was not for Microsoft, I would still be using my Apple II+.

I've spent hundreds and hundreds of dollars on PC software that did not function together. An example is mail-merge. To my knowledge, Microsoft Office is the only software, even today, in which the word processor (Word), the spread sheet (Excel), and the data base (Access) work flawlessly together. As a consequence, MS Office is the only business program I need today.

Microsoft is the best thing that's happened to this country since sex!

Please do not kill it.
